

# Apple Magsafe Wireless Charger

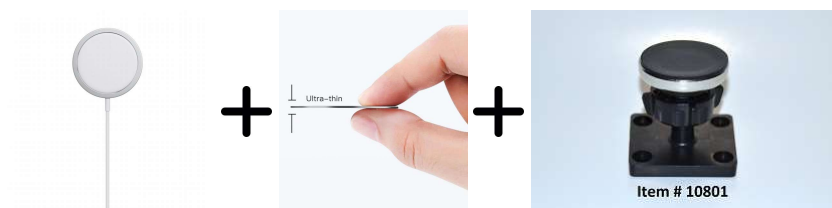

Did you know that the Apple Magsafe Wireless Charger can be attached onto our A-Tach vehicle specific mounts?

Here is how ...

First, you can use some strong double sided tape to attach the Apple Magsafe Wireless Charger right onto the face plate of the A-Tach mount. That is the easy and simple way to use the charger with a mount. However, some customers like to have the ability to tilt the phone to a more desirable angle and for that here is another idea.

You can also use our **Standard Magnetic Device Holder** (product.asp?itemid=360) to allow the Apple Magsafe Wireless Charger to tilt to a variety of angles. Simply attach the (included) very thin round metal plate onto the back of the Apple Magsafe Wireless Charger and it will securely hold to the A-Tach Magnetic Holder that is attached onto your A-Tach mount. It is that easy. Also, then the Apple Magsafe Wireless Charger can be easily taken off the mount and used elsewhere when needed.

**It is a smart idea and it works!**
